PROFESSIONAL SUMMARY

Backend-focused software engineer experienced in payment systems, POS integrations, API integrations, and event-driven architecture. Skilled in Node.js, TypeScript, Java, Kafka, MySQL, AWS, and Docker, with production experience supporting transaction services, KYC-related workflows, and legacy application migration.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java
Backend: Node.js, Express, Spring Boot, REST APIs
Data and Events: MySQL, Redis, Kafka, XML/JSON transformation
Cloud and DevOps: AWS (EC2, S3, Lambda, CloudWatch), Docker
Tools: Git, Postman, logging and monitoring

EXPERIENCE

Java Developer (Contract)

Mar 2026 - Present

Counter Service Co., Ltd. (7-Eleven Group), Bangkok

- Develop and maintain backend services for payment systems and transaction processing.
- Integrate external client systems and APIs; support testing with Postman.
- Handle XML/JSON transformation and encryption/decryption workflows for KYC-related processes.
- Migrate legacy applications from Java 8 and Tomcat 8 to Java 17 and Tomcat 10.1, updating dependencies and application configuration for compatibility.
- Investigate production logs and resolve real-time service issues.

Software Engineer (5A / 5B)

Nov 2022 - Present

Gosoft (Thailand) Co., Ltd., Bangkok

- Promoted from Software Engineer 5B to 5A in April 2025 based on performance.
- Develop POS backend systems using Node.js and MySQL, including REST APIs and Redis caching.
- Manage deployments in Docker and AWS environments, and support logging and monitoring with CloudWatch.
- Work on integration with internal and external services.

Senior Backend Engineer (Contract)

Sep 2025 - Feb 2026

Lotus's (CP Group), Bangkok

- Built Node.js and TypeScript backend services for POS systems.
- Implemented Kafka-based event-driven architecture for real-time data processing.
- Designed scalable APIs supporting high-volume store operations.
